

Manual Update of UTM VM

Open the UTM downloads page: <https://mac.getutm.app> and click **Download** to download the virtual machine.

Once downloaded, click the newly downloaded file.

Drag it into the **Applications** folder.

You will see a message:

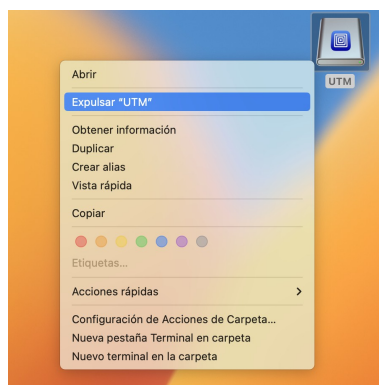

“An older item named ‘UTM’ already exists in this location. Do you want to replace it with the one you’re copying?”

Click **Replace**.

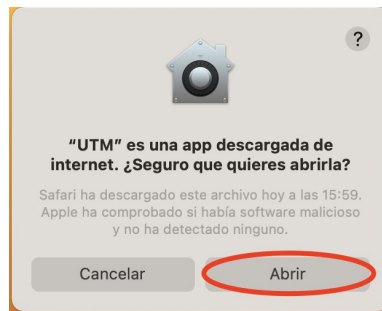

Once replaced, UTM is now updated.

Close the window and eject the disk.

That's how simple it is to update it.

When you open UTM again, a security message may appear — click **Open**.

Then a new window will appear showing the changes in the new update — click **Continue**.
